#### Definition

The experiment was made of 3 actions, to vary conditions in your system, and 10 probes, to collect objective data from your system during the experiment.

#### Steady State Hypothesis

The steady state hypothesis this experiment tried was “**Verifying services are healthy and pod accepts api request**”.

#### Before Run

The steady state was not verified.

---

Probe	Tolerance	Verified
statefulset-fully-available	True	False

---

#### After Run

The steady state was not verified.

---

Probe	Tolerance	Verified
-------	-----------	----------

---

#### Method

The experiment method defines the sequence of activities that help gathering evidence towards, or against, the hypothesis.

The following activities were conducted as part of the experimental's method:

Type	Name
probe	deployment-available-and-healthy
probe	count-pods
probe	pod-is-not-available
probe	Pods-in-conditions
probe	Pods-in-phase
probe	Pods-not-in-phase
probe	read-pod-logs
action	terminate-pods
probe	service-is-initialized
action	delete-deployment
action	scale-deployment
probe	microservice-available-and-healthy
probe	read-microservices-logs

## Result

The experiment was conducted on Thu, 25 Feb 2021 11:30:49 GMT and lasted roughly 0 seconds.
